

August 2006

ASTRO S.A. is now producing newsletters in a pdf format only, I hope this enables easier printing. Links to web sites may need to be typed into your browser, or with some pdf readers cut and paste will work.

Peter's Page JUNE 9th 2006

Robert ... opened the meeting at 8.05pm with a welcome to all.

Matthew ... Reported that John Paul had died and that he, Peter and Ken had represented ASTRO at his funeral.

Devashaon ... Reported that the ASTROSA stall at the BODY MIND PHSYCIC fair was a success and that everyone helping there had enjoyed themselves, even though only six people had attended the talk. 100 pamphlets had been handed out and people had expressed interest in ASTRO. He suggested that we do it again.

Andrew ... said that ASTRO had paid for a third of the stall. He said that there had been good interest in his piggery effluent solution and that he had made a lot of good Email and general contacts.

Ken ... said that there was an excellent atmosphere there and everyone had had a ball. He suggested that next time we might consider hiring two adjacent stalls and use one for coffee and recruiting new members. He said that everyone loves magnets and that we could sell the magnets with the tubes.

Matthew ... agreed with Ken and said that we needed moving exhibits (with the exception of the spiral exhibit). He said that plenty of people were interested in Chris's Shauberger turbine and that **Cecilia's** magic touch in decorating the stall was excellent. He added that we needed to start planning earlier and that **Devashaon** had done a great job.

Robert ... mentioned some books on "How to get rid of arthritis and rheumatism" and the "Metabolic Diet" by William Woolcott and Trish Fahey. "Sugars that Heal" - "Brain Allergies" by William Philpot, where high power magnets, North pole inwards, put on head, instantly bring relief. He also mentioned "Homocystine Revolution .. You are not crazy, its your hormones".

Devashaon ... said that he had been looking at Fulvic acid as a help to the uptake of minerals (into the body).

Ken ... said that the group had been getting Emails from Africa, England and Bosnia.

Mark ... (in reference to magnet motor experiments) said that people had been looking at magnetic flux - MV^2 Inertia. He said that this was the same for magnetic fields in that 1 unit of mag field = 1 force, and 2 units of mag field = 4 forces, 3 = 6 forces etc, but not to forget that each increment correspondingly takes double the energy to produce. He said that there were lots of patents (on mag motors or generators) but none successfully switch magnetic fields.

Ken ... said that there are motors out there that switch fields mechanically. He drew up and explained BH magnetic curves and said that the non linear areas had special very interesting and innovative applications.

Andrew ... said that rare earth magnets were made by aligning the small powdery magnets with a strong field and then pressing them into shape. That is what makes them so incredibly strong.

Warwick ... Spoke about Jim Stephens time over here and the workshop with ASTRO members on the "Flynn Motor". He explained the interesting anomaly of parallel path. During the experiment the group had come to some interesting points where there was a measurable increase in pull for a decrease in magnetizing current. He said that he had made a small motor but the mechanical losses were high and that he was making a larger motor with smaller losses.

Michael ... said that someone had come up to him at the Psych Fair and said that the plates on his oxy/hydrogen generator were too far apart. He said that they should be no more than 1 mm apart. He showed some absolutely magnificent bismuth crystals that he had bought. He said that there was a patent on making bismuth semiconductors.

Mark ... said that bismuth was the most dia-magnetic of all materials. He explained that it could be used to stabilise magnetic fields to the point where a magnet could be suspended in air between two pieces of bismuth.

Ashley ... mentioned that the welds on the US Navy ship that disappeared during the Philadelphia experiment had been doped with bismuth. He also mentioned the Hutcheson effect, where a lot of High Voltage equipment in a room had produced some very strange effects like levitation and materials like stainless steel, wood and metal all intermixed together. He mentioned a Webb site, Alexchia.com, which featured plastic rings with neo magnets, N-Pole in on one finger and S-Pole in on the other little finger, worn at night producing healing (acupuncture type) effects. Ashley produced an innovative stereo headset that Ron E had invented for wearing comfortably whilst sleeping. It had the top headsets imbedded into sponges and held by a gortex band onto the head.

Ashley ... said that next month's ASTROSA speaker would be Malcolm Clark.

Matthew ... said that a computer friend had offered to transpose the ASTRO VHS video library onto DVD for no more than \$600.00, stating that this was considerably easier and cheaper than buying our own equipment and doing it ourselves.

Martin ... mentioned that Timothy Good, an international speaker and author (see www.timothygood.co.uk/) would be speaking at the Marion Sports & Recreation Centre, 262 Sturt Rd Marion on Wed 27th Sept at 7.00pm. Tickets \$25.00, bookings 85560193 or 85568253.

Peter ... mentioned an article from Australian Science Nov/Dec 2005 pg 9, where an X40 strength X-ray solar flare is said to have had the energy of 10,000 trillion barrels of oil. He coupled this with an article from

Electronics news April 2006, where there was a warning of an approaching solar storm cycle. This is part of the 11 year cycle, but is expected to be 30 to 50% stronger than the previous one. The article said that, using new techniques, researchers found the cycle could generate shock waves that disrupt the magnetic field around the earth and could potentially wreak havoc in electronic networks. Peter said that the last cycle had caused electrical and electronic blackouts in Canada that lasted for months. He speculated that this was the real cause of global warming, not CO2 build up.

Robert ... said that there was an increase in sickness with increased sunspot activity.

Ashley ... said that a NASA scientist claimed that the Earth's wobble (Chandler Wobble, of a 433 day cycle) had recently stopped for the first time.

Robert ... said that the ASTROSA AGM would be held in August and asked members to consider officers.

Ken ... Mentioned an interesting Web site that described how to make "Negative Resistors" from junk.

See <http://home.earthlink.net/~lenyr/index.html>

Robert ... closed the meeting at 10.40 pm and invited everyone to supper.

Cheers until next meeting.

Peter

Peter sliding a magnet down some aluminium.

Peter's Page July 2006

Ashley ... opened the meeting at 8.10pm with a welcome to all and accepted apologies from Ken and Robert N.

Andrew ... produced an assortment of electrical bits to give away.

Ashley ... also had a pile of books to give away.

AndrewS ... likewise had a TV and a printer to give away.

Matthew ... announced that the next meeting would include the AGM and that, following the death of John Pierre, our auditor; he moved to nominate Brian Dempsey to fill the position. This was seconded by AndrewS and carried.

Chris ... said that he had been researching Stanley Meyer, especially on the shape of his hydrogen producing pulses. He had also come across the chemistry of atomic hydrogen in a book written in 1940. He said that the Germans used this before WW2 and suggested that we search on Moyler and K. Ward for more information. He also added that hydrogen can also be used in fluorescent light tubes instead of argon.

Michael ... said that he had seen on the Webb that diamonds can be made in a microwave oven! He also commented that the stainless steel used in the Joe and Meyer cell had to be conditioned. This then at 12 Volts and 1 Amp produced a large volume of hydrogen. He said that he had seen a Hybrid Joe Cell working. This was made by B Hill and was about 80% Joe Cell. This ran continually on 12 Volts and was fed to (no into) the manifold.

Hans ... produced wind up torch that lasted for half of an hour with five a minute wind up. He had bought it from Repco.

Ashley ... said that RonEs la test OCR scanner could scan books very quickly, which he then turned into talking books.

Michael ... said that he was going to Melbourne to a Barry Hilton meeting on water on the 19th July. He said that he had ordered a DVD of the meeting. A discussion was held on getting a small group together to drive over to Melbourne for the meeting, but nothing was formalized.

Vic ... said that he had a DVD on "A Perpetual Motion Machine to Die For".

Andrew sa id that he was building one, about 2 feet in diameter.

Guest speaker # 1. Extreme X2O

Damien ...Had a new water device that he said alkalyzed the water and changed the structure of the water. He gave a demonstration using coffee, tea and Pepsi Cola, which fizzed out of the bottle. He claimed that it de-clumped the blood, which could be verified under a dark field microscope. The product was called Extreme X2O

Guest speaker # 2 Malcolm Clark

The Creative Creation

Malcolm gave an excellent talk on the philosophy of modern man, explaining that, as the ancients before them, must re-awaken to and become one with the harmonic process of creation and realize the creator within. (As the computer broke down at about half way through, Malcolm has volunteered to complete the talk at a later date.)

The meeting closed at 11.15, followed by supper. Cheers until next meeting.

Peter
