HELPING TO SAVE THE PLANET

## June 2007 Newsletter

---

### PETER'S PAGE APRIL 13<sup>th</sup> 2007

**Chris** ... opened the meeting at 8.20pm with a welcome to all. He started off by discussing Tesla at Colorado Springs, where he was using conductive salt water as a dia-magnetic fluid. He said that calcium sulphate (caso4) only liberates oxygen and hydriodic acid only produces hydrogen, with reactions only at the respective cathode or anode.

**Michael** ... demonstrated some new coils that he had been winding. It was a bi-filar experiment and the outer coils were tuned to the frequency of the inner smaller coils, which were inserted in opposing directions. He had sparks flying every where, stating that he was producing voltages about nine times higher than normal, with a lot less current.

He mentioned that he had viewed a DVD by Jeff O'Hara titled "Flaming White Arc", from which he had picked up some interesting technology based around Tesla's coil. This DVD went further in as much as re-defining Tesla Technologies, with such term as pseudo sparks and induced sparks.

**AndrewS** ... said that he had been to Mt. Gambier and had installed one of his EV water conditioning units on a potato washing machine for the "Department of Innovation". It was a 1,000 acre farm, with half potatoes and the other half cattle. They had run out of dam water for

the cattle and were using bore water, which had a nasty sulphur smell. They treated some of this water with an Ecovortec unit and the cattle really showed their preference to drink it in preference to the foul smelling water.

Andrew added that Dr Brian Hardy had also set up an experiment on a pig farm with two troughs with water meters. The pigs showed a 5 : 1 preference for the EV treated water.

**Peter** ... mentioned an article from the previous Nexus Magazine on ORMUS, where the new science of orbitally rearranged molecules is discussed in detail. (Please see "previous articles" in <http://www.nexusmagazine.com> site) Peter speculated that the Ecovortec, Carefree and Hydrosmart water conditioners all were forms of ORMUS converters, in that they all changed the molecular state of the chemicals in the water that flowed through them. In this way the salt, seen by most as an enemy of agriculture, is actually converted to a state that the plants can use (like trace elements and fertiliser). He said that in ancient times, the Babylonians mixed 1 part sea water with 25 parts fresh water, and this was reportedly the only fertiliser that they used on their famed hanging gardens. He also added that he believed the almost total ignorance of ORMUS by Australian scientists was jeopardising our agricultural future, especially in areas of salt damage to land and the ignorance that brackish water could be used in agriculture. He said hat he had seen 5600 – 6500 ppm salty bore water used to grow magnificent Lucerne crops at Kieth and that in the United Arab Emirate they used

11,200 ppm salty water to successfully grow market garden vegetables. See Webb sites <http://carefree.com.au> and <http://hydrosmart.com.au> for a huge amount of information on these units.

**AndrewS** ... agreed with Peter on the ORMUS speculation and added quite a lot more information on the subject.

**Bruce** ... said that electric cars were coming to force in the "Re-New" Magazine!

**David** ... said that the Re-New magazine Adelaide group had a meeting every second Tuesday in the month.

**Ray** ... said that the next Re-New speaker was going to be the chap that developed the motor in the 1970's for electric cars.

**Bruce** ... displayed his safety interlock unit that he had built for Ray's Sherpa electric car. It was very professionally made and covered all conceivable safety interlock functions including a self test to prove that it was actually working.

**Andrew** ... mentioned post catalyst heart transplants in that some idiosyncrasies of the donor seemed to be passed on to the recipient.

**Dino** ... said that the Spirit connects to you through your blood. He also mentioned that the Melbourne Nexus group had bulk bought Ozone generators, usually selling for \$300.00. They were selling them to members (including us) for \$70.00.

**AndrewS** ... said that air through his EV units cracked oxygen to monatomic ozone. He also mentioned that he had been taking zeolite for a month ( to clean out any heavy metals in his body). He said that it was an effective and cheap way of removing 99% of toxic substances in his body in six weeks.

**Roger** ... said that he used to sell "Non Scents" zeolite years ago. He said that there were 19 different varieties of zeolite. He added that the hexagonal hollow variety could absorb smells for 3 months and that it could be regenerated by placing it out on the roof for three days. Roger added that it also used to be used in water softeners and that it kills alcohol on the breath.

**Matthew** ... said that a new experimenter's group (like ASTROSA) was forming in the Fleureau Peninsular. It meets every six weeks and they are very interested in our stuff and would like some of us as guest speakers. They are due to meet on 4<sup>th</sup> May at the Middleton Pioneer Hall, and are called the "Watershed Group". He invited ASTRO members to attend if they could.

**Ashley** ... said that he now had a folder with 200 DVD's, with a thousand books and MP3's in it.

Matthew ... put forward the motion to grant Ashley \$200.00 for the library. This motion was passed.

**Ron** ... Mentioned a book of suppressed inventions that he had acquired and produced a cheep MP3 that he had loaded a whole book onto it and gave it away.

**Chris** ... closed the meeting at 11.05, followed by supper.
