

ASTRO S.A. Inc

HELPING TO SAVE THE PLANET

August 2007 Newsletter

PETER'S PAGE 13th JULY 2007

Chris ... opened the meeting at 8.10pm with a welcome to all and proceeded straight into a demonstration of over unity. He drew a circle and then a line to the centre, which he said was unity. He then drew past the centre which he said was over unity. He demonstrated this with a set of electronic scales and 1Kg in a sock and a stick. He said that it did not break any laws – it was just a different way of looking at it – saying that it was a matter of pressure over area and could be considered as a gravity amplifier.

Warwick ... said that he would not be convinced until he saw a unit running on the bench to prove it.

Chris ... then demonstrated a range of LED lights. He had a big 225 Watt street light with eight times the incandescent light output, which made it equivalent to a 1900 Watt incandescent light. It had an estimated life of 50,000 hours

and represented a power saving over the life of the lamp of 10 times the initial cost. He also had a range of other lights varying down to small down lights. He intended to market these lights from his company :-

LEDA AUSTRALIA, Chris Gargula prop,
2 Hawke Rd. Victor Harbor, South Australia
5211, ph 0408 648 222.

Michael ... said that he went to the "Tom Bearden" Webb site and that he had bought "Energy in the Vacuum 1 & 2" DVD's and a book on the new tri-filar wound over unity Bedini motor. He demonstrated his version and said that the negative spikes from the motor are fed into a battery, which in turn helps to draw negative energy into it, like a heat pump, except that it was drawing energy from the surround. He also said that he had 60 DVD's on Tesla Coil builders, of two hours recording time each and all different.

Dino ... discussed his detoxing with sunflower oil. He then gave a demonstration of a 3.5 inch multimedia external hard drive with a large amount of ASTRO SA information on it, which he bought from EBay for \$50.00. He then demonstrated a Far infrared portable sauna, which he had also bought on EBay for \$227.00.

It was an "INA Health" 1000 Watt unit, which he claimed to be more de-toxing than a regular steam sauna.

Devashaon ... had built a 55cm by 89cm by 144cm high 3 layer orgone chamber to sit in and meditate.

Ashley, Andrew and Peter ... briefly discussed the global warming scenario. Peter said that it was now called 'Climate Change' and that it was basically due to sun spot activity and that carbon credits was a Y2000 type scam.

Victor ... demonstrated a bio-organic device for measuring energy. He said that all bio-fields were linked. His device used a small tub of yoghurt as a biological energy sensor. The resistance changed with the bio-fields in the surrounds, such as emotions. He said that it was sensitive enough to measure what people were thinking of you and that his two sons were quite proficient at using it.

Bruce ... produced a magnetic pulser, which he said, unlike many other therapeutic units, used pulsed DC to reduce the 50Hz component. He said that he used it with the North Pole up and that it also sped up the healing of broken bones.

Ron ... said that he had come across a set of extremely rare books by Wilhelm Reich and had converted them into talking books. He also produced his latest gizmo, an insulated crock pot. Just heat it up, turn the power off and it stays hot and continues to cook the meal.

Hans ... said that this was an old way of cooking. He said that he would bring his pot of rice to the boil and then put it in his bed, stating that it always came out good!

Jan ... said that he did much the same as Chris's gravity wheel two years ago. He said that he saw on TV a man using an 800Watt motor to drive a flywheel that was coupled to a generator producing 5000Watts on the other side. Ha added that he had formed a society

with some Polish scientists to make gravity devices!

Ashley ... Suggested that ASTROSA should buy a 3.5 inch portable hard drive to bring the video library in to meetings on. He said that he had seen a vortex rain head demonstrated on an inventor's TV show several weeks ago. He also mentioned that he had come across a Wilhelm Reich museum and that a DVD set on Reich was available and would be a good asset for our library. Ashley said that there was a Webb site, <http://www.coralcastlecode.com> that claimed that the Coral Castle code had been cracked, using sacred geometry, flower of life and a good understanding of magnetics and gravitics.

Warwick ... said that he did get some results on his parallel path motor, but had made a mistake in using a second hand bearing which only had a five thousandth of an inch tolerance. They had found out that the clearances were absolutely critical and that some laminates could not be brought closer than 20 thou. As it was it had an efficiency of 76% as a generator and 90% as a motor, and they could not stall it by hand with only 15 Watts of power being applied to it He added that it was very tricky to get it to operate in its parallel path mode and that it might need electronic timing as one hundredth of a degree difference could make a 5% difference in efficiency.

Matthew ... gave the treasurer's report, saying that we had \$1350.00 in the bank. He added that we had two months to think about new officers for the AGM, saying that some members as himself had held their positions for 5 years, and Peter had looked after both libraries and was still the minutes secretary after 10 years (as well as doing the tea and coffee), and needed a break.

Devashaon ... put two motions to the vote.
1 / that ASTROSA purchase a 3.5 inch multimedia drive for the library.
2 / that we purchase the Wilhelm Reich DVD set. Both motions were agreed to.

Chris closed the meeting at about 11.00pm and invited everyone to supper.

PML Builds 640hp Electric MINI

From:

<http://www.worldcarfans.com/2060724.006/photo>

Surely it can't be an Electric Mini?!

While all the world's most famous motoring names look on, a British company, PML, has chosen the UK's most prestigious motor show as the venue to strip away all the misconceptions surrounding electric/hybrid vehicles and to showcase a truly awesome car. Featuring four revolutionary electric wheels, the standard BMW Mini One you can see on Stand 270 is predicted to have a top speed approaching 150mph and to out-accelerate a Porsche 911 Carrera from 0-60mph. Brake horsepower is a stunning 160bhp per wheel - 640bhp in total. The car, dubbed the Mini QED, has been designed to run for four hours of combined

urban/extra urban driving, powered only by a battery and bank of ultra capacitors. For longer journeys at higher speeds, a small conventional internal combustion engine (ICE) is used to re-charge the battery. In this hybrid mode, fuel economies of up to 80mpg can be achieved.

Steorn announcement: Kinetica Demonstration

Further to Steorn's announcement yesterday (5th July) regarding the technical difficulties experienced during the installation of its "Orbo" technology at the Kinetica Museum in London, Steorn has decided to postpone the demonstration until further notice.

Sean McCarthy CEO stated that "technical problems arose during the installation of the demonstration unit in the display case on Wednesday evening. These problems were primarily due to excessive heat from the lighting in the main display area. Attempts to replace those parts affected by the heat led to further failures and as a result we have to postpone the public demonstration until a future date."

He continued that "we apologise for the inconvenience caused to all the people who had made arrangements to visit the demonstration or were planning on viewing the demonstration online."

Over the next few weeks the company will explore alternative dates for the public demonstration.
